Re: Postdoctoral Research Associate

Dear Prof. Bignell and Dr. Catania,

My name is Xiaoqing, I just finished my PhD study at Hans-Knöll-Institute in Jena, Germany under the supervision of Dr. Matthew Blango. I expect to have my defense in July 2026. My PhD studied how fungi produce, process, and deploy RNAs to regulate its biology in the context of human-fungal interactions. The project you posted focusing on chromatin regulation in *Aspergillus fumigatus* grabs my interest, because *A. fumigatus* is the fungus I studied the most and as a student coming from RNA background, studying chromatin may make me a more comprehensive scientist.

During my PhD, I investigated RNA regulation on both sides of human-fungal interactions. In *Aspergillus fumigatus*, I was also interested in fungal small RNAs, dsRNA metabolism. I analyzed sRNA-seq and mRNA-seq data to characterize the small RNA landscape and the contribution of RNAi machinery to fungal biology. After the bioinformatic prediction, we further use qPCR as well as Northern blot for the experimental validation. Through this project, I studied how to grow pathogenic fungi, RNA-seq analysis and wet-lab experiments. Work has resulted in two publications on *RNA* and *Molecular microbiology*. In parallel, I also participated in a project investigating transcriptomic responses in human PBMCs. Through characterizing transcriptomic responses after fungal stimulations with a focus on host alternative splicing and A-to-I RNA editing, we surprisingly found out that one fungus can induce RNA editing as well as disrupt host RNA splicing. Work has gained me experiences analyzing multiple RNA-seq cohorts, DEG analysis via DESeq2, alternative splicing analysis via rMATS-Turbo, RNA structure analysis via SHAPE-Map and RNA editing analysis.

What draws me to this project is the opportunity to work at pH and other stresses response in *A. fumigatus*. I shortly studied the pH-responsive transcription factor *pacC* in this opportunistic fungus, with a hypothesis that a small RNA might target *pacC*. I am excited to continue working on this perspective at the level of chromatin. Second, I am seeking an international collaborative work environment, as I find integration into a vibrant team important for my development and performing high-quality science. MRC is a large research center. I value the interdisciplinary nature of the team.

Thank you for your time and consideration.

Best,

Xiaoqing

SUMMARY

RNA biologist and computational transcriptomics researcher with expertise in high-throughput sequencing, gene regulation, and RNA-mediated cellular responses. Experienced in integrating molecular biology with bioinformatics to study small RNAs, RNA interference, alternative splicing, and RNA editing across host and microbial systems. Proficient in RNA-seq analysis, reproducible computational workflows (R, Bash), and sequencing-based approaches for investigating post-transcriptional regulation.

TECHNICAL SKILLS

- **Molecular Biology:** sRNA cloning, NGS library preparation, GUS reporter assays, luciferase and GFP reporter assays, Gibson Assembly Cloning, Genetic Engineering, Northern Blot, qPCR, PCR, immunostaining, LC-MS, cultivation of microorganisms (BSL-1/2), plant cultivation and tissue preparation
- **Bioinformatics:** RNA-seq, sRNA-seq, differential expression, alternative splicing, small RNA characterization and target prediction, data visualization, HPC (Slurm), UCSC, SwissProt, KEGG, NCBI
- **Programming:** R, Python, Bash, Git, Docker, Linux
- **Language:** Chinese (native), English (fluent), German (B1)

EXPERIENCES

RNA landscape of human fungal pathogen *Aspergillus fumigatus*

- Characterized RNAi and tRNA fragments processing pathways in *A. fumigatus* across developmental stages (conidia, mycelium), revealing morphotype-specific RNA regulatory mechanisms
- Analyzed differential expressed genes on mRNA-, sRNA-seq datasets, uncovering post-transcriptional regulatory networks controlling fungal development and stress response.
- Validated genes of interest (sRNA, tRNA fragments, sRNA targets) via qPCR, northern blot

Human PBMC transcriptome changes upon fungal stimulations

- Analyzed pathogen-specific transcriptomic signatures in human immune cells responding to fungal pathogens, characterized differential expressed genes, alternative splicing, A-to-I RNA editing, pathogen recognition receptor pathway activation
- Built HPC pipeline, wrote custom R scripts for multi-condition cohort analysis

Human neutrophils exporting extracellular RNA upon *A. fumigatus* confrontation

- Analyzed EV-associated sRNA, tRNA, and mRNA cargo from primary human neutrophils during fungal challenge

Non-coding RNA analysis of rice-*Xanthomonas oryzae* interaction

- Studied how T3SS-dependent bacterial effectors from *Xanthomonas oryzae* shape host non-coding RNA regulation; performed GUS reporter assays, plant cultivation, tissue preparation, LC-MS, qPCR, and PCR
- Engineered overexpressed and knockout mutants of circular RNA and microRNA in rice, established genetic tools that enabled investigation of ncRNA-mediated regulation

Teaching

- Microbiology and Molecular Biology, MMB005, 2022-2025. Supervised master students investigating gene regulation together with Dr. Blango and other colleagues.

EDUCATION

PhD | Microbiology, Friedrich Schiller University, Germany (supervisor: Dr. Matthew Blango) 2026

Thesis: RNA regulation in host-fungal interactions: investigation of the host epitranscriptome and fungal small RNAs

MSc | Bioengineering, Chinese Academy of Sciences, China (supervisor: Dr. Kuaifei Xia) 2021

Thesis: Non-coding RNAs ciR133 and miR168a-5p play roles in response to Xoo and abiotic stress in rice, respectively
